Before You Begin

Before beginning installation, read these directions and the Consumer Product Safety Commission Information. For your safety and convenience, plan each step of the installation and purchase the necessary hardware in advance. The hardware required and the order in which you perform the steps depend on the mounting and connection method you choose.

Step 1  Assembling the Antenna

Assemble the entire antenna on the ground.

1. Use the supplied hardware to assemble the two main boom sections, as shown. If necessary, lift one end of the main boom so the crossover wires reach the threaded posts.

2. Use the supplied hardware to loosely attach the supplied mast clamp assembly to the main boom, as shown. Move the antenna’s elements out of the way as needed to access the mast clamp holes.

3. Press the supplied large end plugs into the main boom.

4. Pull both UHF bowties away from the main boom until they lock into place. Then slide each of the bowtie’s unattached ends over the antenna’s lead-in terminals labeled CONNECT LEAD-IN HERE (one for each half of the bowtie on each side of the boom)

Step 2  Unfolding the Elements

1. Hold the main boom’s elements near the pivot points and do not attempt to unlock them. Doing so might break the elements.

2. Hold each wing boom and turn its elements until the snap squarely into place (perpendicular to the boom).

3. Fold out the wing booms and secure them into position with the supplied 1¼-inch screws and wing nuts.

4. Press the supplied small end plugs into the wing booms.

Step 3  Connecting the Coaxial Cable

We recommend RG-6 cable and, if you prepare your own cable, a quality F-connector. (Your local electronics store carries a variety of suitable cables and connectors.)

Note: If you prepare your own coaxial cable, be sure to slide the supplied matching transformer’s weather boot onto the cable before you attach the F-connector.

1. Thread the supplied matching transformer’s spade terminals (on both sides of the boom), then secure them with the supplied washers and wing nuts.

2. Screw the cable’s F-connector onto the matching transformer.

3. Slip the weather boot over the connection. If you use a prebuilt cable without a weather boot, cover the connection with weather-resistant tape.

Step 4  Attach to the Mast

We recommend that you enlist the help of another person before you put up the mast or attach your antenna to it. How you set up your mast depends on your specific installation. Refer to the Consumer Product Safety Commission information for recommended methods.

1. Slide the antenna’s mast clamp assembly over the end of the mast.

2. Tighten the mast clamp assembly’s lock nuts to hold the antenna in place. Do not overtighten the lock nuts.

Caution: The crossover wires must not touch the antenna boom, the mast, or each other. If necessary, carefully bend the crossover wires to provide at least ¼-inch of clearance between the parts.

Step 5  Routing the Cable to Your Audio/Video System

Use plastic tape or mast standoff insulators to secure the coaxial cable to the mast at about 3-foot intervals. Continue down the roof and the side of the house using roof and wall standoff insulators.

Use coaxial cable nail clips every few feet to secure the cable between the mast and where the cable enters the house.

Use a 75 ohm grounding block (available at your local electronics store) at the point where the coaxial cable enters the house. Read the Consumer Product Safety Commission Information for grounding instructions.

Use a wall-through lead-in tube (not supplied) to neatly route the coaxial cable through walls.

Loosely bend the cable to form a drip loop before the cable enters the house.

Connect the antenna’s coaxial cable to your audio/video system’s antenna terminals according to the types of connections you have. Your local electronics store carries a variety of splitters and other accessories; choose the one that best suits your needs.

Limited Warranty

This product is warranted by Antennacraft against manufacturing defects in material and workmanship under normal use for ninety (90) days from the date of purchase from Antennacraft dealer, except as provided herein. Antennacraft makes no express warranties and any implied warranties, including those of merchantability and fitness for a particular purpose, are limited in duration to the extent of the written warranty. Provided herein. Antennacraft shall have no liability or responsibility to customer or any other person or entity with respect to liability, loss or damage caused directly or indirectly by use or performance of the product or arising out of any breach of this warranty, including but not limited to any damages resulting from inconvenience, loss of use, loss of data, property, revenue, or profit or any indirect, special, incidental, or consequential damages, even if Antennacraft has been advised of the possibility of such damages.

Some states do not allow limitations on how long an implied warranty lasts or the exclusion or limitations of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

In the event of a product defect during the warranty period, take the product and the sales receipt as proof of purchase date to any Antennacraft dealer. Antennacraft will, at its option, either (a) correct the defect by product repair without charge for parts and labor; (b) replace the product with one of the same or similar design; or (c) refund the purchase price. All replaced parts and products, and parts on which a refund is made, become the property of Antennacraft. Non-reconditioned parts and products may be used in the performance of warranty service. Replaced parts and products may not be re-warranted for the remainder of the original warranty period. You will be charged for the repair or replacement of the product made after the expiration of the warranty period.

This warranty does not cover (a) damage or failure caused by or attributable to acts of God, abuse, alteration, misuse, improper usage of abnormal usage, failure to follow instructions, improper installation or maintenance, alteration, lightning or any other incidence of excess voltage or current; (b) any repairs other than those performed by an Antennacraft authorized service facility; (c) consumables such as batteries; (d) cosmetic damage; (e) transportation or moves; or (f) costs of product removal, installation, set-up or service adjustment or replacement.

This warranty gives you specific legal rights, and you may have other rights which vary from state to state.

ANTENNACRAFT, PO Box 1005, Burlington, IA 52601, 319-758-8050           www.antennacraft.net            8/09

This warranty gives you specific legal rights, and you may have other rights which vary from state to state.
WARNING: INSTALLATION OF THIS PRODUCT NEAR POWERLINES IS DANGEROUS. FOR YOUR SAFETY, FOLLOW THE INSTALLATION DIRECTIONS.

You can be KILLED if this antenna occurs with power lines.

READ INSTRUCTIONS.

FOLLOW THESE RULES AND LIVE
1. If you're not sure about a careful, safe installation—don't try to do it yourself. Call your local power company or check with Yellow Pages under "Antennas or Television and Radio Antenna Systems" for an installer in your area.
2. With at least two people, assemble as much of the antenna on the ground as possible.
3. Watch out for overhead power lines. Check the distance to the power lines before you start installing—WE RECOMMEND YOU STAY A MINIMUM OF TWICE THE MAXIMUM LENGTH OF THE ANTENNA AND ITS MAST AWAY FROM ALL POWER LINES.
4. Do not use a metal ladder.
5. Remember, even the slightest touch of an antenna to a power line can cause a fatal shock.
6. Don't try to do the job on a windy day.
7. Have a friend watch as a spotter on the ground when you're on the roof to see things you can't.
8. If you start to drop the antenna, get away from it and let it fall.
9. If any part of the antenna comes in contact with a power line CALL YOUR LOCAL POWER COMPANY. DON'T TRY TO REMOVE IT YOURSELF! They will remove it safely.
10. Keep mast, lead-in and metal guy wires away from power lines, too. They are all excellent conductors of electrical current.
11. Be sure everyone understands the danger of touching an overhead power line. Tell them never to try to remove any object touching a power line.
12. Make sure the antenna and mast are properly grounded.

SELECT AND MEASURE YOUR INSTALLATION SITE
Before attempting to install your antenna, think of where you can best place your antenna for safety and performance. Most antennas are supported by pipe masts attached to the chimney, roof, or side of the house. Generally, the higher the antenna is above the ground, the better it performs. A good practice is to install your antenna about 5 to 10 feet above the roof line and away from power lines and obstructions.

Remember that the FCC limits your antenna height to 60 feet. If possible, find a mounting place directly above your set, where the antenna lead-in wire can take a short, vertical drop on the outside of the house for entry through a wall or window near the set. To determine a safe distance from wires, power lines, and trees:
1. Measure the length of your antenna.
2. Add the antenna length to the height of your tower or mast.
3. Double this total for the minimum recommended safe distance.
   If you cannot maintain this safe distance, STOP! GET PROFESSIONAL HELP.

CHOOSE A STRUCTURE MOUNT
Follow the installation directions for the individual type of mount you choose.

BASE AND ROOF MOUNT: Mast locks into U-bolt. Swivel base fits the slope of mast rods.
VENT PIPE MOUNT: For smaller antennas. Attaches to vent pipe.
UNIVERSAL MAST ANCHOR MOUNT: Has U-bolt for easy swivel. Adapts to most roof slopes.
WALL MOUNTS: Used on side of structure.
EAVE MOUNT: For attaching antenna mast to hanging rafters or trim boards.
TRIPOD MOUNT: Studly antenna mount for larger antennas. Subject to stronger winds. Fits most roof slopes.
CHIMNEY RATCHET MOUNT: Provides secure mounting in chimney with straps.
TOWER: Not recommended, for professional use only.
TELESCOPIC MAST: Has interlocking sections, for professional use only.

ANTENNA GROUNDING
To protect your house and your TV/FM installation, your antenna system must be properly grounded.

1. Clamp a #10 copper wire to the base of the antenna mast. Using stand-offs every 4 to 6 feet, run the wire down the building in as straight a line as possible.
2. Attach a 75 ohm grounding block (available at your local electronics store) to the antenna's lead-in cable as close as possible to the point where the cable enters the house.
3. Attach the grounding wire to the grounding block and attach the wire to the central building ground. Acceptable central building ground points may include:
   • Grounded interior metal cold water pipe within five feet of the point where it enters the building.
   • Grounded metallic service raceway
   • Grounded electrical service equipment enclosure
   • 8-foot grounding rod driven into the ground (only if bonded to the central building ground by #6 or heavier bonding wire)
   • Other acceptable grounding electrodes that comply with sections 250 and 810 of the National Electrical Code (NEC)

ANTENNA REMOVAL
To remove the antenna, follow the instructions for installing the antenna, but start with the last step first. That's the only safe way to remove an antenna.

GENERAL INSTALLATION DIRECTIONS FOR MAST MOUNTED ANTENNAS
1. Assemble your new antenna on the ground at the installation site. Follow the separate assembly instructions that come with it.
2. Install the selected mount for your antenna.
3. Attach the mast and antenna to the mount. Note: If you are going to use guy wires:
   • Install guy wire anchor bolts.
   • Estimate length of guy wires and cut them.
   • Attach to mast using guy wire ring.
   • Have a second person hold the mast upright while the guy wires are attached and tightened to the anchor bolt.

IF AN ACCIDENT SHOULD OCCUR WITH POWER LINES
1. Call for emergency help.
2. Don't touch a person who has come in contact with the antenna and the powerline (you'll be electrocuted, too).
3. If the victim is free and clear from any electric powerlines and is unresponsive, administer CPR until emergency help arrives.

WATCH FOR POWER LINES! You can be KILLED if this antenna comes near electric power lines.
