**Don’t forget to Scan for Channels**

Auto Scan or Channel Scan is a necessary process that you must run on your HDTV or converter box before you start receiving channels.

Make sure you are scanning for TV Antenna (ATSC) and NOT Cable TV (QAM). Scanning for cable stations will bring up partial or no channel list.

**180 DAY LIMITED WARRANTY**

This Xtreme Signal product is hereby warranted against defects arising from faults in materials or workmanship for a period of 180 (one hundred and eighty) days starting from the original date of purchase. Neither Solid Signal, Xtreme Signal, nor Signal Group LLC will honor a warranty claim unless accompanied by original proof of purchase. All warranty claims must be made to a Solid Signal authorized dealer or directly to Solid Signal. In the case that the dealer involved in the purchase of your antenna is unavailable or unknown, contact Solid Signal at 25225 Regency Drive, Novi MI 48375, either by phone at 877.697.4462 or via info@solidsignal.com.

This product warranty covers only the parts originally included in the package and includes neither the cost of shipping, removal or installation, nor any parts purchased ancillary to this sale for the purpose of installation. If this product is damaged or fails in any way due to having been improperly installed, abused or neglected or due to any accidental or intentional tampering with the product as manufactured, this warranty shall be void. If this product is damaged due to acts of nature or corrosion caused by environmental factors (such as salt spray or acid rain) this warranty shall be void.

Should this product require warranty replacement, the customer shall be responsible for all shipping and handling charges required to return the product to a Solid Signal dealer. At its option, Solid Signal or a Solid Signal authorized dealer shall repair or replace this product and return it to the customer with no additional freight charges due.

This warranty policy is the sole warranty for this product. Neither Solid Signal nor its authorized dealers shall be responsible for enforcement of any other warranty either express or implied made by any other entity. Express, Implied, or Statutory Warranties including warranties of fitness to a particular purpose or merchantability are limited to this single 180-day warranty. This warranty is the sole and exclusive remedy for any customer, whether in contract, tort, or otherwise. Neither Solid Signal nor its authorized dealers shall be liable for any damage or loss, whether incidental or consequential, except as set forth above. Commercial loss shall not be covered except as set forth above.

This warranty is enforceable to the extent that it is not superseded by local or state law. Consult with local authorities for any specific legal rights which may apply to your jurisdiction.

**What’s Included**

- (2) Reflectors
- (1) Dipole
- (3) Sections of Antenna Boom
- (1) Mounting
- (1) Mast Clamp

Small hardware such as wing-nuts and clamps are also included but come already attached.
ASSEMBLY INSTRUCTIONS

Unfold elements by rotating them forward until they snap into place.

Attach the three sections of antenna with the brace and wing-nuts that come already.

Next, the dipole is attached by wing-nut and bolt to the antenna before the first set of directors.

Insert the reflectors into the brace and secure tightly with wing-nut and bolt.

Next clamp on the mounting brace by lining it up with the designated holes on the boom.

Antenna Placement for Best Signal

Antennas work off of line of sight, so to get the best performance place the antenna where it has a clear view. An obstruction like a building or hill immediately in front of the antenna reduces signal more than a building down the street. Try and avoid placing the antenna within 3 feet of any metal objects that could interfere with reception.

If you live in a valley or have obstructions, try and put the antenna up higher to compensate for signal loss.

Being at an elevated position can be helpful for antenna reception.

Installing an antenna in the attic makes it less effective and may require you to use a larger antenna.

WARNING

RISK OF ELECTROCUTION

Every year people are injured or killed from antennas or masts making contact with overhead power lines. Be sure to thoroughly check mounting site to ensure there is no risk of this antenna touching a power line.

Always be aware, and use caution when going up on a roof. Besides the risk of falling, the electrical shock that comes from contacting a power line with your antenna or mast is equal to being struck by a bolt of lightning.

Aiming your Antenna

This antenna picks up approximately 60° wide out of 360°. Aim the antenna to face the center of the group of stations you are trying to receive.

If you are having trouble getting a particularly weak channel, you can try pointing the directly at the compass heading.
