

PUSH-IN CABLE CLIP

DESCRIPTION

Secures Series 6 dual shield, Series 6 tri-shield, or Series 6 quad-shield to hard surfaces with this clip. Simply drill a 1/4" hole in any surface and this clip will provide a good hold.

Very neat installation, very pleasing comestically. Nothing is visible with the exception of the top of the small cylinder.

With a little effort, dual coax can be secured with the same clip, even though this was not the intent of the design. Carefully make a small slit in the webbing between the two coax wires and slip one clip over one wire. It does work and it looks good also.

UV resistant nylon 66, stays flexible for a long period of time.

FEATURES

- No risk of damaging coax jacketing
- Clips conform to coax surface without indenting or creating a RF 'choke'
- Clip conforms to various diameters of coax
- Almost 360° of grip prevents sliding of coax
- UV resistant PA plastic for a long lifespan and security
- No 'surprise' shorts or unseen coax cable penetration as is common with staples

PACKAGING

- Black or white
- 100 pieces per bag
